My Abstract.

# CHAPTER 1

## A Chapter

This is a chapter. It includes examples of a section, a subsection, and a subsubsection. You can reference chapters, sections, subsections, and subsubsections with the `\ref` command: Chapter 1, Section 1.1, Subsection 1.1.1, Subsubsection 1.1.1.1. Your chapters, sections, and subsections will all appear in the table of contents. Subsubsections will not appear.

This thesis package will generate a list of tables and figures. You can also generate a list of acronyms using the `\ac` command. To do so, include the acronym definition in the `\abbreviations` section in the `thesis.tex` file. The acronym should be called using the `\ac` command within the body of the document. For example, an abbreviation for the word Thesis (TH) has been defined in `thesis.tex` using the command `\acro{TH}{Thesis}`. The first instance of this abbreviated word will be spelled in full, while following instances will be shown as TH. By default, Latex will add an “s” to the abbreviation in order to make it plural, as in “Thesiss.” In order to use a more complicated plural form, the pluralization needs to be defined explicitly in the `\abbreviations` section as follows: `\acrodefplural{TH}{Theses}` . To use the plural form of the abbreviation, use the `\ac{TH}` command in the body. Note that only abbreviations which are used in the body of the document will be included in the table of abbreviations.

### 1.1 A Section

This is a section.

#### 1.1.1 A Subsection

This is a subsection. It will be included in the table of contents.

##### 1.1.1.1 A Subsubsection

This is a subsubsection. It will not be included in the table of contents.

# **APPENDIX A**

## **An Appendix**

This is an appendix. To start the appendices, use the `\appendix` command in the `thesis.tex` file.
